

From Hazarsolve & Salco, a Full Complement of Custom-Built & Stock Rubber-Lined Parts

THE RUBBER: Our rubber-lined parts are lined on the outside with a special blend of Butyl. The inside is lined with a soft natural gum.* Butyl provides protection from harmful ultra-violet light and has a high durometer, which produces a better torque value, increases the parts' sealing capabilities, and helps prevent non-accidental releases (NARS). The soft natural gum on the inside - and on all surfaces the liquid or commodity might contact - has a low durometer, thus providing for longer-lasting parts. The rubber is NOT sprayed on. It is manufactured as sheet lining that comes in rolls and is custom-cut to fit the parts.

RUBBER-LINED PARTS

- Manway covers (railcar, trailer)
- Dome lids or fill-hole cover (railcar, trailer)
- Spool pieces (education tubes, adapter spools, etc)
- Tees - any size (1", 2", 3", etc)
- Available in black- or tan-colored rubber**

ADDITIONAL SERVICES

- Stripping / relining of old parts
- New linings for custom parts
- Rubber lining repairs

* Parts can be lined with materials other than Butyl and soft natural gum.

** Contact your Hazarsolve representative for additional colors available.
