Description

911	Full-port
911XP	Full-port with extended packing
944	Standard port
944XP	Standard port with extended packing

The **911** valves are both standard length and full-port designed, which means your processing system can be more compact, efficient and economical.

The standard port **944** provides an even more competitive alternative to the full-port **911**. Operation torques are correspondingly lower to provide for easier operation and lower actuation costs.

The **911** and the **944** are available with the "XP" extended packing option for improved emissions control.

Salco is an authorized distributor of Tufline transportation-related valves
