

## Test And Evaluate The Integrity of Your Rubber-Lined Vessels

*Lining-integrity testing allows the integrity of interior linings to be evaluated each time a vessel is filled. By tracking readings over time, gradual lining degradation can be detected before serious shell failure occurs.*

### KEY FEATURES

- Helps to ensure liner integrity at the time and point of checking.
- Allows lining to be tested while under load.
- Saves cleaning costs and out-of-service costs, which reduces the need to clean the car to perform a lining inspection.
- Helps to ensure intact lining on every shipment.
- Reduces the need for spark testing, which saves time and money.
- Reduces confined space entry to prove lining integrity.

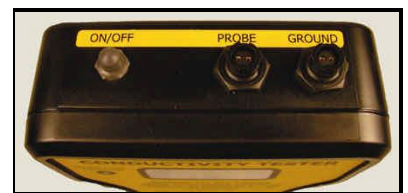

**NOTE:** Take proper precaution to prevent contact with the product being tested and the cord to the product.

**User Friendly:** Our Conductivity Tester features a large digital LCD read-out. It also has a large grounding clip and a T-handle ¼" diameter probe that allows access to the commodity through the Salco Hazarsolve surge protector or the dip tube.

### NEW Features:

Improved connection points provide a secure union for probe and grounding clamp

Ergonomic rubber grips

Indicator light
